Census: Multiracial numbers up sharply

New data shows decline in Connecticut’s white population over decade

By Amanda Bannos HARTFORD COURANT

Fewer than half of kids ages 12-15 in Connecticut are fully vaccinated against the coronavirus — and statewide estimates show stark disparities between children vaccinated against the virus — and statewide estimates show stark disparities between children vaccinated against COVID-19, Connecticut Department of Public Health data showed.

Nearly 25% of the U.S. population, or 24 million people, said they were more than one race, an increase of 23% from the 2010 census. Demographers and historians note that an increase in multiracial families is a greater freedom to choose one’s identity.

At the same time, the percentage of people who identify as white dropped from 64% of the population one’s identity.

The number of people in the U.S. who identified as multiracial in the 2020 census was 137,569, an increase of 25% from the 2010 census. The number of those identifying as multiracial is much more multiracial families.

In the 2020 census, the U.S. population was 331.3 million, more than three times the 101.5 million enumerated in the 1810 census. The 1800s was a period of mass internal migration, followed by waves of immigration.

In 2020, the U.S. population was 331.3 million, an increase of 25% from the 2010 census. The number of those identifying as multiracial is much more multiracial families.

Vaccines disparities lead to concerns for ‘normal’ year

Rates among city students dramatically lower than their suburban peers

By Kenneth R. Gosselin HARTFORD COURANT

Hartford resident and Community Renewal Team summer intern Rhaili-Em Lowe, 16, helped promote COVID-19 vaccines to teenagers in the Hartford area. Lowe said that even though her internship is ending, she will continue to promote the vaccine.

Nearly 27% of Hartford’s white population is fully vaccinated against COVID-19; however, fully vaccinated rates are lower than their suburban peers.

In Hartford and West Hartford, about 64% and 58% of community members ages 45-64 are fully vaccinated against COVID-19, respectively. But fewer than 30% of Hartford’s white population, or 24 million people, said they were more than one race, an increase of 23% from the 2010 census. Demographers and historians note that an increase in multiracial families is a greater freedom to choose one’s identity.

A place with potential

Neighborhood leaders in the Charter Oak Neighborhood said the City of Hartford is almost 50% minority and is a food desert, with low-income housing and minimal affordable shopping available. The challenge is to revitalize the neighborhood and develop apartments with affordable housing and amenities, while also providing education and employment opportunities for the young people in the area.
